## Assuring 100\% Plant Capacity with your Dryer Environmental System -RTO Redundancy-

$\frac{\text { MEGTEC }}{\text { BRy }}$
Rodney Schwartz
VP Global Sales

## Target Zero - Our Global Safety Vision

Making Safety Personal
Zero is Achievable Incidents are Preventable Safety is Personal All Day, Every Day Willingness to Intervene

Sustainable System, Talent \& Capabilities

## Comprehensive Global

 EHS\&S Management System with externally accredited operations (ISO, OSHAS, OSHA VPP)

Getting Results
Proven results with continually improving best-in-class performance

$20 \%$ reduction in injury frequency, and $24 \%$ reduction in injury

Our mission is to provide best-in-class and top decile performance, striving to be an industry leader and externally recognized leader.

Efficient, integrated, market differentiator.

## Babcock \& Wilcox MEGTEC Corporate Headquarters

Located in De Pere, Wisconsin:
êB\&W MEGTEC employs approximately 350 people in the US and approximately 600 globally
êChemical, Mechanical and Electrical Engineers and Designers
ê100+ Service, Technical and Support Personnel
ê100+ Manufacturing Personnel
êDedicated R\&D and Pilot Laboratory Support Team
êOracle ERP, Risk Management Programs, Salesforce CRM

## Business Platforms

## Products

Wet \& Dry Electrostatic Precipitators
Wet \& Dry Scrubbers
Pulse Jet Fabric Filters (Baghouses)
Multiclone ${ }^{\circledR}$ Dust Collectors SCR/SNCR Systems
Evaporative Gas Cooling Systems

Air Flotation Dryers
Regenerative Thermal Oxidizers (RTOs)
Solvent Recovery Systems
Carbon Adsorption Systems
Distillation Systems
Heat Recovery Systems

Belt/Conveyor Dryers
UV or IR Dryers
Custom Drying Systems
Specialized Coating Lines
Material Handling Equipment

## Services

Replacement Parts \& Service
Equipment Rebuilds
Preventive Maintenance

Energy Optimization
Equipment Relocations

## Environmental Technology Development

## In the Beginning... circa 2001

[匃 Wood Panel Board Industry - Do we or don't we?

ê Consent Decrees mid-1990s

- Major Producers forced to install pollution control equipment - "quickly"
- The first wave of products and projects had significant problems
ê PCWP (Plywood Composite Wood Products) MACT promulgated September 28, 2004
ê Large airflows with low VOC/HAP content = high thermal efficiency required
ê Products to offer - WESP/RTO/RCO
ê There will be significant resources and investment required to make a difference

## Ceramics Engineering

## What We've Learned

êCharacteristics of random and structured ceramic beds in OSB with SYP and northern hardwoods and MDF with northern hardwoods
êNo two mills are the same - ever!
êPlugging factors (organic and inorganic particulate) associated with EFB and dry ESP upstream of RTO
êWhere (exactly) inorganic ash builds up in the ceramic bed
êCleanability of random and structured ceramic beds
êlmpact of sodium and potassium salts on many different types of media (random and structured) including the impact of temperature
êBecame experts on inlet gas stream characterization and the importance of how it applies to different ceramics and RTO design
êHow to design and deliver high thermal efficiency beds

- Every \% increase in thermal efficiency $>95 \%=20 \%$ lower gas consumption

## Two Fold Problem

Bed plugging
ORGANIC
［罒Buildup on coldface
［団 Condensables on ducting and valves
［団Solution is an EFFECTIVE bakeout

INORGANIC

## Bed degradation

団 Alkali attack over 1000F
［鿊 Spalling，chipping and cracking
［炳 Fusing together eventually plugs the bed
［団］Solution is particulate control of sub－micron ash，and／or alkali－ resistant ceramics

WInorganic buildup in bed
［圆Hard to clean out
［圆］Solution is EFFECTIVE bed wash

## What Producers Want.

- Safety
- Maximum Up Time
- Simplicity
- Reliability

- Maintenance Friendly Design
- Predictable Maintenance
- Reduced Energy Consumption

## Effective Maintenance

ê Effective 2-hour bake outs (condensable particulate)

- Effective = uniform airflow and temperature
- Can be accomplished monthly during a down day
ê Effective Wash outs (filterable particulate)
- Ceramic beds that are "washable"
- Proper RTO wash water drainage system

## RTO Redundancy

ê 100\% plant capacity during predictive or unpredictive maintenance events
ê Lower Operating Costs

- Natural Gas - Increased Thermal Energy Recovery
- Electrical - Lower Operating Bhp
ê Increased Capital Costs
- "More" RTO
- Man-safe isolation dampers

ê Maintenance is done off-line and in a controlled environment
ê No need to wait for a regular down day or scheduled outage to do maintenance work

## RTO Redundancy

## 図What is the cost of unexpected down time for your mill?

## Energy Savings \& Payback

| Capital Cost Increase | $18 \%$ |
| :--- | :--- |
| Fuel Savings | $6.2 \mathrm{MM} \mathrm{Btu} / \mathrm{hr}$ |
| Electrical Savings | 212 kW |
| Annual Operating Cost Savings | $\$ 300-\$ 400,000$ |
| Payback | $3-4$ years |

## 286,000 ACFM - SYP

## Energy Savings \& Payback

| Capital Cost Increase | $26 \%$ |
| :--- | :--- |
| Fuel Savings | $6.2 \mathrm{MM} \mathrm{Btu} / \mathrm{hr}$ |
| Electrical Savings | 326 kW |
| Annual Operating Cost Savings | $\$ 400-\$ 500,000$ |
| Payback | $2-3$ years |

## 300,000 ACFM - Hardwood/Softwood

## 300,000 ACFM - Harwood/Softwood

## Energy Savings \& Payback

| Capital Cost Increase | $26 \%$ |
| :--- | :--- |
| Fuel Savings | $4.9 \mathrm{MM} \mathrm{Btu} / \mathrm{hr}$ |
| Electrical Savings | 242 kW |
| Annual Operating Cost Savings | $\$ 300-\$ 400,000$ |
| Payback | $4-5$ years |

## 300,000 ACFM - SYP

## 300,000 ACFM - SYP

B:W

## 300,000 ACFM SYP

## Energy Savings \& Payback

| Capital Cost Increase | $27 \%$ |
| :--- | :--- |
| Fuel Savings | $7.2 \mathrm{MM} \mathrm{Btu} / \mathrm{hr}$ |
| Electrical Savings | 236 kW |
| Annual Operating Cost Savings | $\$ 400-\$ 500,000$ |
| Payback | $3-4$ years |

## What We've Accomplished to Date

OSB/Wood 3,800,000 acfm treated
MDF 802,000 acfm treated
Particleboard 600,000 acfm treated
Plywood Veneer 525,000 acfm treated
Total: $\quad$ 5,727,000 acfm treated
RESUTS

## Maximize Up Time

- RTO Redundancy
- $100 \%$ plant capacity during predictive or unpredictive maintenance events
- Lower Operating Costs
- Natural Gas
- Electrical
- Increased Capital Costs
- Predictive maintenance can be done off-line and in a controlled environment
- No need to wait for a regular down day or scheduled outage to do maintenance work

Thank you!
